

# Petrobras P55 Export Lines

Client:  
Petrobras (Petroleo  
Brasileiro S.A.)

Location:  
Campos Basin, offshore  
Brazil

Project Type:  
SURF

Awarded in late 2009, the P55 Export Lines project is another major award for Subsea 7's Brazil territory, recognising our capability and experience in the delivery of major EPIC projects of this nature.

Subsea 7's workscope for the P55 project is to engineer, procure, fabricate, install and commission one 12" gas export line (38.7km long) and one 12" oil export line (42km long), connecting the P55 platform to the PRA-1 platform. The scope of work also includes the procurement and installation of associated subsea equipment. The two lines will provide the flowline section for the oil and gas export from the future Module 3 Platform (P-55) in the Roncador Field, located in the Campos Basin, to PRA-1.

## P55 Export Lines

### Project

Petrobras  
P55 Export Lines

### Client

Petrobras (Petroleo Brasileiro S.A.)

### Location

Campos Basin,  
offshore Brazil

### Water depth

100m to 1,750m

### Project Type

SURF

### Date Awarded

October 2009

### Date Completed

N/A

### Vessels/Spoolbases Utilised

*Seven Oceans*  
*Seisranger*  
*Ubu Spoolbase*

### Overview

Subsea 7's workscope for the P55 project is to engineer, procure, fabricate, install and commission one 12" gas export line (38.7km long) and one 12" oil export line (42km long), connecting the P55 platform to the PRA-1 platform. The scope of work also includes the procurement and installation of associated subsea equipment. The two lines will provide the flowline section for the oil and gas export from the future Module 3 Platform (P-55) in the Roncador Field, located in the Campos Basin, to PRA-1.

Managed by a project team in Subsea 7's Rio de Janeiro office, the project will be supported by Subsea 7's engineering team in London and its global engineering centres of excellence worldwide.

Engineering is scheduled for completion in January 2011 with offshore installation scheduled to commence in February 2011. Pipeline fabrication is due for completion in June 2011 at Subsea 7's Ubu Spoolbase in Brazil.

The *Seven Oceans* pipelay vessel will carry out the installation of flowlines and will be supported by the *Seisranger* for survey and light construction work.
